**Project 7 Error Message Layout**

**This handout will help with the formatting of the error messages in project 7**

**In all error messages, the bottom row of asterisks should contain 41 \*'s**
**On the top line two spaces are on either side of the error heading phrase**

```
1) Input file failed to open (Input file 10 – does not exist)

***********  File Open Error  ***********  (11 *'s, title, 11 *'s)
==> Input file failed to open properly!!
==> Attempted to open file: kss
==> Terminating program!!!
*****************************************

2) Invalid package type (input files 4, 11)

********  Invalid Package Type  ********* (8 *'s, title, 9 *'s)
==> Error in data file!!!
==> The package type is incorrect
==> Terminating program!!!
*****************************************

3) Invalid character present in package parameters –
